Chronological Tables,

Shewing the Kings Reign, the Golden Number, the Epact, the Sunday-Letter, Easter-day and Trinity-Sunday, in every Year from the *Norman* Conquest in 1066 to the end of its *Æra* in 1597, being 532 Years. Then place 1598 under 1066. and so on. For what relates to Easter &c. will be in the same Order of Time it was 532 Years past, or to come, and so every 532 Years for ever.

The Years of the Kings and Queens Reigns, are continued in the second Column, under the Titles Years of Kings.

The Following Table shews the Moveable Feasts and Terms for Ever

Note, Easter is the Basis of all the Lords Days, tho' it be a Moveable Feast, and falls sometimes higher sometimes lower; yet it governs all the other Moveable Feasts, Terms, &c. Seek therefore in the Revolution Tables foregoing, the Day on which Easter falls in any Year you desire, then find the same Day in the following Table, under the Title Easter-Day and against it in a Straight Line are the Feasts and Terms required.

A TABLE shewing (by the help of Easter-Day) all the Moveable Feasts, with the Beginning and Ending of the Terms in the *Julian* or *English* Kalendar for Ever.

Easter Day	Shrow. Sund.	Rogati. Sunday	Ascensi. Dom.	Hilary Term		Easter Term.

Note, In every Leap-Year, in which Easter falls before the 19th day of April, Shrove Sunday will be one day later in February than is noted in the other part of this Table.

IN the Chronological Table, you have by Inspection, the Days, Month, and Year of each Kings Reign, Corresponding to the Year of our Lord: by which you may readily find, the Year of our Lord and Month, in which any Writings were made, that have the dates of the Year of the Kings Reign and not the Year of our Lord. You likewise may quickly Count how many Years, Months, Weeks and Days are past since the making of any Deed, Evidence, Instrument, Lease or Writings that have the Year of our Lord, or the Year of the Kings Reign since the Conquest.

Here is also the Prime or Lunar Cycle of the *Golden Number*. The *Epaet* or Cycle of the *Moon*. The *Dominical* or Cycle of the *Sunday Letter*, *Easter-Day*, and *Trinity Sunday*, in every Year since the *Norman Conquest A. V. C. 1066*. to this present Year 1716. and so on to the last Year of the Revolution of *EASTER*. Being 532 Years, in which time are Comprehended all the Varieties and Changes of the *Golden Number*, *Epaet* and *Sunday Letter*, that is, *Easter*, the *Moon* and the Days of the Week, have all their Variations in that Space of time.

Therefore at the end of the last Year of the Revolution begin again, going round as it were in a Circle, for every thing that relates to *Easter* &c. will be in the same order of time it

was 532 Years past, or 532 Years to Come. and so every 532 Years Ad infinitum.

Note, the Sun-Day Letter changes on the first of *January*, and every Leap Year has two Dominical or Sunday Letters, the first holds to the 25th of *February*, and the latter to the end of the Year, which if you divide by 4 and there be no Remainder, 'tis Leap Year: But if there remain 1, 2, or 3, then one of those are the first, second, or third, after Leap Year.

N. B. The Sunday Letter *A* always begins the Astronomical, Year on the first Day of *January*, *B* the second, *C* the third, Day &c,

The *Epaet* Changes on the first Day of March, and is the Age of the *Moon* the 28 of *February* Inclusive.

The *Golden-Number* Changes on the first of *January*. And being counted from the first New Moon in *March*, the third Sunday after is *Easter-Day*, but if the *Golden Number* fall on a Sunday you must reckon that for one of the There.

And here it may be Observed that the 19 *Golden Numbers* which have Relation to the Calendar in the Common Prayer Book of the Church of Great Britain, begin with *March* the 8th, and end with *April* the 5th, and are placed in a Column even with Certain Days in every Month in that Calendar i. e. in *March*, 3 is set against the

the first Day, 11 against the 3d, and 19 against the 5th, &c. which are the Days of the New Moon, but in Reality the Moon is 5 Days Old at the least on each of those Days, and so on all the rest of those Conjunction or New Moon Days in that Calendar. And this very Year 1715, *Easter* should be Celebrated on the 10th of *April*, if any regard were had to the *Vernal Equinox*, or the *Paschal Cannons* past in the Council of *Nice A. V. C. 325*.

The exact Astronomical time to Celebrate *Easter*, may with ease be given, by making our Days and Months, Correspond to the true Place and Motion of the *SUN*, (or the *Earth*) which for the Future, would Rectify the Yearly Errors that have been creeping into our Calendar ever since the *Nicene Council*, to the displacing of the Seasons of the Year, and

The Feasts, Fasts, and Terms, in the several Months as they are fixt, or moveable, with Reference to *Easter*.

WHEN the Moon is New in *February*, the next Tuesday after is *Shrove-Tuesday*, but if it Change on Tuesday, then the next Tuesday following is *Shrove-Tuesday*, the next Day is *Ash-Wednesday* or the first Day of *Lent*, and the next Sunday is the first Sunday in *Clear-lent*, six Sundays after is *Easter-Day*, to which add 5 Weeks, so have you *Rogation-Sunday*, then 'tis 4 Days more to *Ascension-Day*,

Misplacing the Feastivals of the Church. See the Reverend Dr. *Holders Discourse Concerning Time*.

However the New Moon being found according to the *Ecclesiastical Calendar*, the full Moon meant in the Rule to find *Easter* (to wit, *Easter* is always the first Sunday after the first full Moon which happens next after the 21 of *March*) is the 14 Day after Inclusive, that is, accounting the Day of the New Moon for the first, the Sunday after is *Easter-Day*.

But if that 14 Day (or *Ecclesiastical full Moon*) be it self a Sunday then *Easter-day* is the Sunday following,

Now, to Obviate the Difficulty in finding of *Easter*, I have made the Tables above, which agree with the *Ecclesiastical Moons*, and are exactly Calculated to show *Easter-Day* &c. in every Year for ever by *Inspection*,

from which proceed forward Ten Days for *Whit-Sunday*, the next Sunday after is *Trinity-Sunday*, and the next Thursday, *Corpus Christi*, but some reckon 'em thus *Viz.*

Septuagesima or 70. Days, Observ'd in Memorial of the 70. Years the Children of *Israel* were in Servitude under the *Babylonians*, is 9 Weeks before *Easter*. *Sexagesima* is 8. Weeks before *Easter*

G

Easter, Quinquagesima or *Shrove Sunday*, is 7. Weeks before *Easter*, the Tuesday after is *Shrove Tuesday*, and the Wednesday following is *Ash-Wednesday* or the first Day of *Lent*, (the time of taking the Degree of Bachelour of Arts, &c. in Oxford and Cambridge) *Quadragesima* or the first Sunday in *Lent* is 6 Weeks before *Easter*. The 40 Days of *Lent* are Observ'd in Remembrance of the 40 Days in which God Drowned the World, or the 40 Years in which the Children of *Israel* did Penance in the Wilderness. The 40, Days allowed the *Ninevites* for their Repentance, The 40 Stripes by which Malefactors were to be Corrected. *Moses* Fasted 40 Days when He Received the Laws of our God. *Elias* Fasted so many Days. And our Saviour Himself, when He was pleas'd to fast observ'd the same length of time. But some do fast 40 Hours only, beginning about 12 on Friday (the time of our Saviours falling under the power of Death) and Continuing till Sunday Morning, the time of His Rising again from the Dead. *Midlent Sunday*, (the Day on which our Saviour wrought the Miracle of the 5 Loves and 2 Fishes) is 3 Weeks before *Easter*. The Monday following *Midlent Sunday* is Call Day in the Orphans Court, held in Guild-Hall London. *Passion-Sunday* is a fortnight before *Easter*. *Passion-Week*, or *Holy Week* is a distinct time of fasting

and Solemn Humiliation and Repentance: Some Fasting 3, Days together, some 4, and others who could bear it 6, beginning on Monday Morning and not eating any thing till Cock-crowing on Sunday Morning following. And several of the Christian Emperors to shew what Veneration they had for this Holy Season! Caus'd all Law Suits to Cease! the Tribunal-Doors to be Shut! and Prisoners to be set free! *Palm Sunday*, (so called from the *Palm-Branches* Strewed under our Saviours Feet, at His Tryumphant Enterance into *Jerusalem* on this Day) is a Week before *Easter*. The next Thursday after *Palm-Sunday* is *Maunder Thursday*, (the last Thursday in *Lent*, and the first before *Easter*) is the Day whereon our Saviour gave to His Disciples a New Commandment, to Wit, *That ye Love one another*, and in the Evening of the same Day, after his last Supper, and before He Instituted the Blessed Sacrament, Washed his Disciples Feet in the 33 Year of his Life. The next Day being *Good Fryday* He was Crucified and Buried, the Sunday following is the Resurrection of the Holy *Jesus*, (after his 3 Days Interment in the Grave) or *Easter-Day*, which always falls between the 21th of *March* and the 26th of *April* exclusive, (Parish Officers are Chosen in *Easter Week*, Burgeses for *Westminster*, Chosen on Thursday

Thursday in this Week: The Election at *Westminster School* is every second Monday, Tuesday and Wednesday in *Easter Term*, which always begins on Wednesday 17 Days after *Easter*, and ends 4 Days after *Ascension Day*, being 27 Days. The next Sunday after *Easter* is *Low Sunday*, to which add 4 Weeks so have you *Rogation Sunday*, the Monday, Tuesday, and Wednesday following are the 3 *Rogation days*, and is the Time when the Curat with the Young Children and the Substantial Men in every Parish and Township make Perambulation and Procession, to View, and understand the Ancient Limits and Boundaries of every Parish, to prevent all manner of Incroachments, Contentions and Suits at Law. The next Day following is *Holy Thursday*, or the *Ascension* of our Blessed Lord (40 Days after his Resurrection, during which time He Conversed with his Apostles, Eate Meals with 'em, discoursing and instructing 'em in those things that relate to the Kingdom of Heaven) then proceed forwards Ten Days for *Whit-Sunday*, which always falls between the 9th of *May*, and the 14th of *June*, exclusive) 'Tis called *Whit-Sunday* from that Glorious Light of Heaven which was then sent down upon Earth, by the descent of the Holy Ghost at this Time, upon the Heads of the Apostles and other Christians, like Cloven Tongues of Fire, This is the time of Penti-

cost, so called from the 50. Days between *Easter* and *Whit-Sunday* inclusive. The Jews kept their *Pentecost* 50. Days after the *Passover* in Remembrance of the Law delivered to *Moses* in the Burning Mount, the next Sunday after is *Trinity Sunday* (which always falls between the 16th of *May* and the 21st of *June* exclusive) may be so call'd from the three Persons appearing to *Abraham*, of which one was the Judge of all the Earth, and 'tis not improbable but that the others might be the other two Persons of the Blessed *Trinity*, The Monday following *Trinity-Sunday* is the Election at *Trinity College* in *Oxford*, The next Thursday is *Corpus Christi*, and on Friday following, being 5 Days after *Trinity-Sunday*, *Trinity Term* begins, and ends the Wednesday Fortnight being 20 Days.

The 4 *Ember-Weeks* i. e. the *Ember-days* or Fasts of the 4. Seasons (in which the Fruits of the Earth are either Sown, Sprung up, Coming to their Ripeness, or gathered into the Barn) are the Wednesday, Friday, and Saturday after the first Sunday in *Lent*, after *Whit-Sunday*, after the 14th of *September*, and the 13th of *December*, and the Sunday following the Wednesday in each *Ember week*, is Ordination-day in the Church of Great Britain. See the Reverend Mr. *Wheatleys Church* of *Englands Mans Companion*,

The Times Prohibited for Marriage, Us'd to be from after *Advent-Sunday* till 8 Days after *Epiphany*, from after *Septuagesima* till 8 Days after *Easter*, and from 3 Days before the *Ascension* till *Trinity-Sunday*. But the Reverend Dr. Bret has shewed that no time is now Prohibited, See his Letters,

Country Wakes, To Wake from Sleep at the several Vigils of the Night, and go to Prayer, are Observed on the Sunday next after the Saints Day, to whom the Parish Church is Dedicated.

Note, The first Return in *Easter Term* is *Quindeno Pasch*, a Fort-Night after *Easter*, 2d *Tres Pasch*, 3 Weeks after *Easter*. 3d *Mens Pasch*, a Month after *Easter*. 4th *Quinque pasch*, 5 weeks after *Easter*. 5th *Crastino Ascensi* the next Day after *Ascension*.

The first Return in *Trinity Term* is *Crast Trin*. The next Day after *Trinity Sunday*, 2d *Offabis Trin* 8 Days after *Trinity Sunday*, 3d *Quin. Trin*, 15 Days after *Trin*, Sunday. 4th *Tres Trin*. 3 Weeks after *Trinity Sunday*.

For the Returns in *Hilary* and *Michaelmas Terms*, see the Table of Remarkable Days below. Now every one of the Returns in each Term, Consists of 4 Days, and every Day serving to a several purpose, viz. The first is Essoyn and Return-day, 2d, the Day of exceptions, 3d the Day whereon the Sheriff must Return the Writ; and the 4th, is the Day of appearance for all parties,

Term begins 3 Days sooner at *Doctors Commons* than at *Westminster*.

N. B. If the Beginning, Ending; or Return-days, of any Term happen to fall on a Sunday, (which is no Law Day) then the next Day following Serves for the same purpose.

Oxford Terms. *Hilary* or *Lent Term* Begins *January* 14th Ends the *Saturday* before *Palm-Sunday*. *Easter Term* Begins the 10 Day after *Easter*, ends the *Thursday* before *Whitsunday*. *Trinity Term* Begins the *Wednesday* after *Trinity-Sunday*, Ends after the Act, sooner or later as the Vice Chancellor and Convocation Pleases. *Michaelmas Term* Begins *October* 10th ends *December* 17th. The *Monday* after the 6th of *July* the Act Begins.

Cambridge Terms. *Lent Term* Begins *Jan.* 13th Ends the *Friday* before *Palm Sunday*. *Easter Term* Begins the *Wednesday* after *Easter Week*, Ends the Week before *Whitsunday*. *Trinity Term* Begins the *Wednesday* after *Trinity Sunday*, Ends the *Friday* after the Commencement. *Michaelmas Term* Begins *Octo.* 10th, Ends *Dec.* 16th. The first *Tuesday* in *July*, the Commencement Act Begins.

Scots and Irish Terms. *Candlemas Term* Begins *Jan.* 23d, Ends *Feb.* 12th. *Whitsuntide Term* Begins *May* 25, Ends *June* 15. *Lammas Term* Begins *July* 20, Ends *August* 8. *Martinmas Term* Begins *Nov.* 3, ends *Nov.* 29.

Note

Note, in Ireland the Terms are all the same as in England, Except Michaelmas Term, which Begins Octo. 13. and Adjourns to Nov. 3d. and from thence to the 6th, it hath 7 Returns, the first is *Quin. Mic.* Octo. 3d, and the other 6 are as in the English Terms.

The two Learning Vacations

in the 4 Inns of Court London, viz. The two Temples, Lincolns Inns and Grays Inn, Begin the first Sunday in Lent, and the first Monday after Lammas day, and Continue 3 Weeks 3 Days. The Assizes are Held Twice a Year Viz. After Hilary and Trinity Terms,

 23 *Michaelmas-Term* begins, and lasts 37 Days.
 27 *Mens. Mich.* 2d Return.
 28 St. *Simon* and *Jude*, Apostles and Mar 64. *Collar-day*.
 29 Lord Mayor of *London* Sworn.

November 30 Days.

1 All *Saints*, or all *Hollan-Tide*, this is one of his Majesties *Collar days* with Offering, and Household day when the Beasant is given, (a piece of Gold so call'd, the Offerings at the Sacrament are distributed amongst the Poor by the Dean of the Chappel) 'tis also one of the 4 Grand-days in the Inns of Court which singly fall out in every Term. *Viz.*

Candlemas-day in *Hillary*,
Holy

Holy Thursday in *Easter*, *Midsummer-day* in *Trinity*, and all *Saints* in *Michaelmas Term*, on which Days double Commons are allowed, all *Saints* and *Candlemas-days* as the first and last Days of *Christmas*.

2 Election at *all-Souls College Oxon*.

3 *Crastino, Animarum* 3d Return. Vice Chancellor of *Cambridge* Chosen.

5 *Gun-powder-Treason* 1605. Prince of *Orange* Landed 1688.

6 *Leonard*, Confessor 456.

11 *St. Martin*, Bishop and Confessor 397. *Martinmas-Tide*.

12 *Cras. Martin*, 4th Return of *Michaelmas-Term*.

13 *St. Brice* Successor to *St. Martin*, 421. *Danes* Massacred by Women 1012.

15 *Machutus*, Bishop 500.

17 *Hugh*, Bp. of *Lincoln*, 1200.

18 *Octabis, Marti* 5th Return, of *Michaelmas-Term*.

Edmond K. and Martyr 871.

21 *Presentation Virgin Mary*.

22 *Cecillia*, Vir. and M. 225.

23 *St. Clement* first Bishop of *Rome* and Martyr, 92.

25 *Quindeno, Martini* 6th Return. *St Katharine*, V. and M

28 *Michaelmas Term* Ends.

30 *St. Andrew*, Apostle and Martyr, He was the first that found the *Messiah*, and brought others to Him, his Feastival is placed at the beginning of *Advent* as the most proper to bring the News of our Saviours Coming, 80. *Collar-day* with Offering, The President and Council of

the Royal Society Chosen, this Society meet at their College in *Fleet street London*, every *Wednesday* about 3 after Noon.

December Days 31

6 *Nicolas*, Bp. of *Myra*. 342

8 Conception of the Virgin. *Mary* by her Parents *Joachim* and *Anna*, in their Old Age.

10 Winter Solstice, the shortest-day in all the Northern Parts of the World.

13 *St. Lucy*, Virgin and Martyr, at *Cyracusa* in *Cicily*.

16 *O sapientia*, an *Antiphona*, Sung in the Church from this Day till *Christmas Eve*.

20 The *Isarelites*, put away their Wives.

21 *St. Thomas*, Apostle and Martyr, 35. *Collar-day*. Common Council Men Chosen.

25 *Christs* Nativity, A. M. 3948. this is a Grand or Household Day at Court. Fox Hunting comes in and lasts till *Ladyday*.

26 *St. Stephen*, the First Gospel Martyr 34.

27. *St. John*, Evang. and Apostle, 90.

28 Holy Innocents 14000. Infants Murthered by *Herod*.

31 *Silvester*, Bishop and Confessor 335.

Thirty Days has *September*,
April June and *November*;
February, *Twenty Eight* alone:
All the rest have *Thirty One*.
But when Leap-Year comes the
(*Time*,
Then February has *Twenty Nine*.

The Various beginning of our Days and Years.

IN all Civil and Ecclesiastical Affairs, we begin the Year (Consisting of 365 Days 5 Hours 49 Minutes and 16 Seconds) on the 25 of *March*, the same Day Supposed to be the first Day on which the World was Created, and the same Day when *Christ* was Conceived in the Wombe of the Virgin *Mary*. Our Church indeed, as to Her Solemn Service, begins her Year on the first Sunday in *Advent*, which is always the nearest Sunday to St. *Andrews-day* Nov. 30, whether before or after, and is the last of the moveable feasts in the Calendar. The Regnal-year begins with the King or Queens Reign. *Astronomers* begin the Year on the first Day of *January* (according to the Cycle of the *Sun* and *Moon*) and the Day at High Noon or 12 a Clock, at which Time the *Sun* was made, and every Day at that Time it is full South, or in the Meridian, or Culminates, that is, the *Sun* is then the Highest from the Earth, or hath the greatest Altitude it can have for that Day.

We account the Day for Celebrating our Feasts from *Sun* set to *Sun* set, but for payment of Money, Our Lawyers account the Day from *Sun* Rising to *Sun*-Setting. And for Indictments for Murther, the Day is accounted from Midnight to Midnight, and so are Fasting-days.

But tho' our Civil day begins

from Midnight, yet our Religious or Sacred-day, begins at 6 in the Evening and ends at 6 the next Evening, *Gen* 1, 5.

The Week Consisting of 7, Mornings, begins upon *Sunday*, because on that Day *Christ* was born, Rose from the Dead, and sent His Holy Ghost upon his Apostles, Disciples and other Christians, and is that Space of Time in which God made the World.

All Civilized Nations, observe one Day in 7 as a Sabbath or Stated time of Publick Worship.

The *Christians*, keep their Sabbath upon *Sunday*, which is the Day wherein the Light was Created, that Smile of Heaven, and Joy of the World.

The *Grecians* on *Monday*, the Day wherein the Firmament was Created, to separate the Coelestial Waters from the Inferiour and Terrestrial.

The *Persians*, on *Tuesday*, the Day wherein the Waters (which before Covered the whole Element of Earth) were Ranked in their Place: and the Earth appear'd, to become the Dwelling, Nurse, and Grave of Man.

The *Affyrians*, on *Wednesday*, wherein the *Sun*, *Moon*, and *Stars*, were Created.

The *Egyptians*, on *Thursday*, the Day wherein God drew the Birds, and Fishes out of the Waters; the Birds to fly in the Air, and the Fishes to dwell in this lower Element. The

The *Turks*, on *Friday*, where-
in the other Creatures were
brought forth, and Man Crea-
ted, who was then appointed to

them for a King and Governour.

The *Jews*, on *Saturday*, which
is the Day wherein God Rested
from the Creation of the World.

The Use of this Table is to shew
the Day of the Month, and
the Day of the Week for ever.

SEEK therefore in the Revo-
lution Table the *Sunday*
Letter, for the Year you desire,
and if it be G, then all the
Figures under each Month in
this Table are *Sundays*, if F,
is the *Sunday* Letter, then all
the Figures under each Month
are *Mondays*, when E, all the
Tuesdays, when D, all the
Wednesdays, when C, all the
Thursdays, when B, all the
Frydays, and when A, all the
Saturdays. Viz.

G	F	E	D	C	B	A
Sund.	Mon.	Tues.	Wed.	Thur.	Frid.	Satur.
April July	Sept. Dec.	June	Feb. Mar. Nov.	Aug.	Ma.	an. Oro,
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30	31				

This Year 1715. B, is the
Sunday Letter, and shows that
1, 8, 15, 22, 29th of *April*,
and *July* be *Fridays*, add 7 Days
more to the 29 days, and it shows
that the 5, of *August*, and the 6
of *May*, are *Fridays*, and so by
a due Progression you may rea-
dily find, on what Day of the
Month, any Day of the Week,
will fall. Or, you may know
the Day of the Week and the
Day of the Month by Observing
on what Day of the Week, the
Year begins, that is, on what
Day of the Week, the 25 of
March does fall in the Year you
desire, the Figure under each
Month is the same Day of the
Week till the Years end. Thus

you see that the 25th of *March* is
a Key to this Table, and if at
any time it should happen to be
lost, To find it again, this is the
Rule.

To the Year you desire add
its 4th part, and 2, Divide the
sume by 7, and the Remainder
(not the Quotient) of this Di-
vision, gives the Number of the
Day of the Week the first of
March, falls on for the Year,
(which being known, 'tis easy
to count, on what Day of the
Week the 25 will be) as if a 1
remains, 'tis *Sunday*, if 2, *Mon-*
day, if 3 *Tuesday*, &c.

Note, in taking the 4th part
of the Year, you may reject the
odd part.

H 2

A Table

The Use of the Table above.

IN this Table you See, that on the first of *January*, Daylight Begins 53 Minutes after 5 in the Morning, and Ends 53 minutes before 7 at Night. And the *Sun* Rises 1 Minute after 8, and Sets 1 Minute before 4, which is 12 Hours, and so many Minutes as

the Day Breaks, or the *Sun* Rises after any Hour, So many Minute it Ends, or Sets before the other hour to make just 12 Hours.

If the *Sun* &c. Rise at 8, it Sets at 4. If at 6, it Sets at 6. If at 7 it Sets at 5, &c.

To find the Length of Every Day and Night.

Double the Hours and Minutes of the *Suns* Rising, so have you the Length of the Night, and Doubling the Hours and Minutes of his Setting, gives the Length

of the Day, or you may take the Length of the Night from 24 Hours, and the Remainder will be the Length of the Day.

To Find the New, Full, and Quarters, of the Moon.

Seek first in the Revolution Table, the Epact for the Year you desire, to which add the Number of Months from March to the Month propos'd inclusive, and Subtract the Sum from 30 (or 60 if it exceed 30) and the Remainder is the Day of the Month on which 'twas New Moon, then to the Day of the Change add 15, so have you the Full, and by adding 7 Days and 9 Hours to the New, or Full Moon, you have the first or last Quarters. Example, I wou'd know on what Day of the Month

in April in the Year 1715 the Moon will be New. In the Revolution Table you will find the Epact for this Year to be 6. and April is the second Month from March added thereto makes 8, which take from 30, and there remains 22 the Day of the Change, on which Day 15 Minutes past 9 in the Morning (in the Southern parts of great Britain) the Sun will be Totally Eclipsed, and it will be so Dark at London &c. that the Stars will be Visible about the Sun.

To find the Moons Age, for any Day. of any Month, in any Year Present, Past, or to Come.

To the Day of the Month add the Epact for the Year, and the Number of Months from March to the Month propos'd including both Months, and the Sum is the Moons Age, but if the said 3 Numbers added together exceed

30, you must take away 30 (if the Month you are in have 31 Days) if less, take away 29 and the Remainder is the Age of the Moon. Example, I would know the Moons Age the first Day of January 1714 5. Now because the

the Epact don't Change till the first of *March*, you may add the Epact of the Year before *Viz.* 25 and the Day of the Month together make 26, then *January* being the 11 Month from *March*,

added thereto makes 37, cast away 30, and there remains 7, which shews that the *Moon* is 7 Days Old on the first Day of *January* 1714.5.

An other way to know the Age of the Moon.

To the Epact for the Year and the Day of the Month propos'd, add for *Jan.* 0, *Feb.* 2, *Mar.* 1, *Apr.* 2, *May* 3, *June*, 4 *July* 5, *Aug.* 6, *Sept.* 8, *Oct.* 8, *Nov.* 10, *Dec.* 10. (rejecting 30 if need be) so have you the *Moons* Age that Day. The Age of the *Moon* being thus found, for any given Day of any Month in any present Year, and you wou'd know what Age she will be the

same Day of the Month the next ensuing Year, 'tis but adding a 11 to her present Age, and you have your desire, and to that Age add 11, so have you her Age the second Year ensuing, and so on as far as you please, and if you add 19 instead of a 11, you have the *Moons* Age the preceeding Year, Remembring to reject 30.

To know how long the Moon Shineth.

All the time of Her Increase, Multiply her Age by 4, but after the Full, see what her Age wants of 30, the which also Multiply by 4, and Divide by 5, the Quotient gives the Hours of Her shining after *Sun* Set, or before His Rising: the Remainder Multiply by 5, gives the Minutes to be added.

till She be 15 Days Old: the *Moon* follows the *Sun*, and shines after His Setting, to wit in the Evening Her-lightned Part looking into the West, but decreasing that is, after the *Moon* is 15 Days Old She goes before the *Sun*, and shines in the Morning before *Sun*-Rising, Her Lightned part being towards the East.

Note, All the Increase, that is

To find at what Time the Moon Rises and Sets.

Before the Full, add the Quantity of Her shining, to the time of the *Sun*-setting, so have you the *Moons* setting. and for her Rising add the said Quantity of her shining to the *Sun* Rising, and you will have the *Moons* Rising, but after the Full Substract the Hours and Minutes of her shining, from the Hours and Mi-

minutes of the *Sun* Rising, and the Remainder will be the time of the *Moons* Rising. the same also taken from *Sun* Setting, gives the time of her Setting, and if Substraction cannot be made, add 12 Hours, and then Substract, and the Remainder shews the time of the *Moons* Rising or Setting.

To know what 'tis a Clock in the Night by the Moons shining upon a Sun-Dial.

See what the shadow of the Moon on a Sun Dial wants or is past 12 a Clock (for so much it wants, or is past the Hour of her coming to the South that Day) that is, what the shadow wants of 12 a Clock, so much must be Subtracted from the time of her Southing, and if past 12 a Clock then added to the Time of her Southing, and the Sum is the Hour and Minure of the Night.

To find at what time the Moon will be full South, and the Hour of High-Water, or Full Sea at London Bridge any Day of the Year for ever

Multiply her Age by 4, and that Product Divide by 5, the Quotient will be the Hours, and the Remainder of the Division the minutes that the Moon is South, or on the Meridian; to which add 3 Hours. and you have the time of High Water or Full Sea at London, but when the Age of the Moon exceeds 15 you may reject 15 and proceed with the Remainder in stead of the Moons Age.

Note, all the Increase that is, till the Moon be 15 Days Old, she comes to the South in the After Noon, and after the Full she comes to the South in the Morning.

Note, when the Moon is South 'Tis Full Sea at *Quinborough*, *Southampton* and *Portsmouth*. The distance between *Dover* & *Calais* is about 7 Leagues or 20 Miles.

Of the Tides.

At every New and Full Moon 'tis always High Water at London Bridge at 3 a Clock Morning and Afternoon, and every 24 Hours, it alters 48 minutes, that is, when 'tis High Water one Day at 3 a Clock, the next Day it will be High Water 48 Minutes after 3, the next 36 Minutes after 4, the next 24 Minutes after 5, and so on every Day till Full Moon, at which it is always High Water at 3 a Clock again. and alters so many Minutes every Day as before till New Moon.

Note, the motion of the Moon in 24 Hours is slower than the Sun, by 48 minutes, and the

Stars come sooner and sooner to the Meridian, by an Hour in 15 Days, and in a Month by Two, In every Natural Day or 24 Hours (the Sun or the Earth is carry'd from the East into the West, and so Round the World into the East again) There be 2 Tides (that is, as oft as the Moon comes to the N, E. and S, W, points of Heaven,) so in every Month there are two Courses of great Tides & small Tides, viz. 3 Days before the Change and Full Moon, the Day of the Change and Full, and 3 Days after the New and Full Moon, are the great or Spring

Spring Tides. The next Ensuing 7 Days after each course of Spring Tides (about the New and Full Moon) are the small or Neap Tides, which never flow so High, nor Ebb so Low as the Spring Tides.

The Sea Flowes Gently up this River of Thames about 80 miles, almost as far as *Kingston* in *Surry*, being 12 miles by Land and 20 by Water S. W. above *London*: where my Lord Mayors Jurisdiction Extends (along this River) from *Colnie Ditch* a little above *Stains-Bridge*, and not far from *Ryme-Mead* between

Stains and *Windsor*, where King *John* Sign'd the Charter of the Forest, June 15, 1216. to *Pendal* and the Waters of the *Medway*. The Port of *London* for Landing of Goods Extends from the Promontory or Point of Land called the *Northforeland*, in the *Isle of Thanet*, Northward to the *Naze Point*, beyond the *Gunfleet*, on the Coast of *Essex*: and continues Westward up the River of *Thames*, and the several streams, Channels and Rivers falling into it, to *London-Bridge*. Thames, (Signifying a gentle Stream, as *Sir John Denham* has it,

*Though Deep, yet Clear, though Gentle yet not Dull,
Strong without Rage, without Overflowing Full.*

Has its Head at the 7 Springs in the flank of a Hill in *Cotswold Downs*, in the edge of *Glocestershire*, Not far from a Village called *Telreton*, and comes Sporting a long from its first Source, (to *Lechlade*, where it begins to be Navigable and can bear a Barge of 50 Tun) about Ninescore Miles before it embosoms it Self into the Sea, The

Locks, Bridges, Wires and Turn-pikes, it passes in its way to *London*: and what the Barges Pay at such Places, and their distance one from the other by Water, may be seen in the Following Table.

Note, The Thames will bear a Barge of 90 Tun, to *Oxford-Bridge*, S, stands for Stone, W. for Wood.

The Freight of these Barges is				

Corn, Malt, Beer, Cheefe and many other things. And from London, Coles, Wine, and such other Goods as the Country has occasion for.

Note, Below London Bridge the Water Ebbs 7 Hours and Flows 5, above Bridge it Ebbs 8 Hours and Flows 4, and when the Water is at Lowest, then 'tis called Flood, if Rising then Young or Old Flood: When at Highest and begins to Fall Ebb Water.

The Length of a Ship being divided into 300 equal parts, 30 of those Parts are Assigned to the Depth, and the Breadth shall Contain 50, or the one Sixth Part of the Longitude, so will the Ship be both Porportionable and safe for Traffique.

To find the Burthen, or Number of Tuns that any Ship will Carry, Multiply the Length of the Keel taken within Board, (so much as she treads on the Ground) by the Breadth of the Ship within Board taken by the Midship-Beam from Plank to Plank, and that Product by the Depth of the Hold, taken from the Plank below the Keelfey to the under Part of the upper Deck Plank: then Divide the last Product by 94 and the Quotient is the true Content of the Tunnage required.

Starboard, the right side of a Ship.

The Main-yard of a Ship is always five sixth Parts of the Keels Length.

The Shank of an Anchor is thrice as long as one of the Flouke

I and

and half the Beam. To a Ship of 500 Tun, the sheat Anchor or Last Hope, weighs 2000 Pound.

At *Ralphs Key*, lies a Vessel constantly to take in Goods and Passengers for *Hull, York, Leeds &c*

No *Gravefend* Tilt-boat or Wherry shall turn to Wind-ward above one Trip in a Reach, on Forfeiture of Ten Shillings, by the first, and 2s 6d, the second Master Nor take in at first above 37 and 3 by the way. Nor no Wherry; above 7, and 2 by the way, on Forfeiture of two shillings and six pence, for each Passenger a-

bove those Numbers.

Those Plying Westward, not to Carry above Ten Passengers on Forfeiture for each above that Number 2s. 6d.

No Master of a Row-Barge or Light-Horse-Man between *London* and *Windfor &c* shall suffer any Goods or Passengers to be placed on the Bails, on Forfeiture of Ten shillings.

Our Whale Fishing is beyond the North-Cape, in the Latitude of 72, to the shores of *Nova Zembla*, and to the Straights of *Wygats* in the Latitude of 81.

Several Particulars Relating to Trade and Business.

When Merchants Exchange the Coin of one Country for those of another, they do it not by Tale or Estimation, but by the Intrinsic Value, which equally they call the PAR, *Pro pari* or Value for Value, which differs from the Course of Exchange only in this, the Par of Exchange shews what other Nations *Should* allow in Exchange: which is certain and fixed. But the Course shews what they *Will* allow in Exchange, which is Uncertain and Contingent.

Note, England makes her Exchange in Pounds with Rotterdam, Amsterdam, Antwerp and Hamburg. In pence with Paris, Cadis, Madrid, Genoa, Leghorn, Venice, and all other Parts of France, Spain and Italy. In Shillings and Pence with Lisbon, Oporto, and the rest of Portugal. And by the Hundred Pounds with Ireland.

Note, Bills are Drawn to and

from Ireland Payable at 21 Days, and the Exchange 8, 9, 10. Pounds per Cent allowed for Return.

2. Usance is a Calendar Month, as from June 10th to July 10th, Double Usance, two such Months. If a Bill is Payable at Usance 'tis Payable a Month after the Date of the Bill Exclusive of the Days of Grace; which at London are 3. at Rotterdam 6, at Paris 10. at Rome 5, at Hamburg 12, at Antwerp 14, allowed after the Time in the Bill.

3. If you are to Pay a Merchant 789 Pounds, so Receive the Value in Guineas at 1^l. 1^s. 6^d. the Piece, 'tis but Redueing the 789 Pounds into Pence, and Divide those Pence by the Pence in a Guinea, and the Quotient will be the Number of Guineas you are to receive; the remainder (if any) are Pence to be added, and so you may Reduce one sort

1 2 of

of Coin into another of any Nation, when you know the Value of each Piece.

4. *French Coin*, the Denier is 3 tenths of a Farthing, 12 deniers make one Sol, 20 Sols one Liver, or 1*s.* 6*d.* 3 Livers or one *French Crown* 4*s.* 6*d.* the Silver Lewis 4*s.* 4*d.* the new Quarter Lewis 13*d.* the Gold Lewis and Pistole 17*s.* 4*d.* each. 24 Nails, or 45 Inches is a *French Auline*, and their Quintal of a Hundred Pound 16 Ounces to the Pound, makes at *London* 110 Subtle.

5. *Holland, Flanders &c.* The Dutch Stiver is one Penny and one fift of a Penny, 6 Stivers or one Shilling *Flemish* is 7 Pence Sterling. 20 Shillings *Flemish* is 12 Shillings *English*. 33*s.* 4*d.* *Flemish* is 20 Shillings Sterling. One Gilder or 20 Stivers is 2 Shillings. One Zeland or Common Dollar 5 Shillings. One Ducatoon 4*s.* 6*d.* One Specie Dollar 5*s.* Cross Dollar 4*s.* 2*d.* Old Philip Dollar 5*s.* Ferdinando Dollar 4*s.* 3*d.* Pr. of Orange Dollar 4*s.* 4*d.* Leopoldus Dollar 4*s.* 3*d.* Rodolphus Dollar 4*s.* 4*d.* Maximilian Dollar 4*s.* 5*d.* Danish Dollar 2*s.* 11*d.* New Danish Coin Gold with a Crown on one side of it 15*s.* 4*d.* Holland Rider 1*l.* 5*s.* 9*d.* Hungary Ducat 9*s.* 8*d.* Flanders, Albertus 13*s.* double Soveraing of Flanders, 1*l.* 8*s.* 6*d.* Italian, Pistole 16*s.* 7*d.* Gilder of Matthias Emper 7*s.* 2*d.* Gilder of Noremburg,

7*s.* 1*d.* half Cardinal Angel. 6*s.* 4*d.* Chuckeen of Venice 9*s.* 7*d.* Naples Ducat, 5*s.* Messina, Ducat 6*s.* Palermo, Ducat 6*s.* 6*d.* Luca, Ducat 5*s.* 7*d.* Sevil, Ducat 6*s.* Lisbon, Ducat 5*s.* 9*d.* Bolonia, Ducat 5*s.* 7*d.* Rome her Ducat 7*s.* 6*d.* The Amsterdam, Weights is a Pound Consisting of 16 Ounces, whereof 100 make one Quintal, which at *London* is 108 or 109 Pounds Near, their Measure is the Ell, which is 3 Quarters of an *English Yard*, So that 100 Ells make at *London* 74 Yards, 4 Ells *English* is 5 Ells *Flemish*. The Antwerp Quintal of 100 Pounds 16 Ounces to the Pound makes at *London* 104. The *Flemish Ell* is their Measure, which is one 4th part of a Yard *English*: So that 100 Ells *Flemish* makes 60 Ells or 75 Yards *English*.

6. *Spanish Coin*, 13 Malvadies or Mervedies are one Farthing, one Rial is 6*d.* 3 Farthings, 8 Rials, or one piece of Eight Sevil, is 4*s.* 6*d.* A piece of Eight Mexico 4*s.* 6*d.* Ditto Peru is 4*s.* 3*d.* a pillar piece 4*s.* 6*d.* and something more. The Doubloon of Castile is 5*s.* 6*d.* The Valentia Ducat 5*s.* 3*d.* The Saragoza Ducat, 5*s.* 6*d.* The Barcelona Ducat 6*s.* Pattacoon 4*s.* 8*d.* There is a Crown in Barcelona Valued at 22 Shillings, their weight is the Quintal of an 100 Pounds, which makes at *London* 108 Pounds, their Common Measure is called

a Vare, whereof 100 make at *London* 74 Ells, Their Liquid Measure is the Rove, which contains about 4 Gallons. A Hinaga of Corn is a Bushel and a half.

7. *Portugal* Coin, 42 Rees are one Penny, One Vintin is 3 d. One Rial is 6 d. One Mill-Ree or 1000 Rees is 6 s. 8 d. One Testoon is 1 s. 3 d. 100 Rees is one Testoon, 400 is an Old Crusado worth 5 s. The *Lisbon* weights are 16 Ounces to the Pound, their Measure for Linnen Stuffs and Silks is called the Var, Containing about 42 *English* Inches, their Canedo is 3 Quarters of an *English* Yard, Their Measure for Corn is the Alquier, whereof 3 make a Bushel, and 15 make a Tun *Bristol* Water Measure, 60 Alquiers is one Moy of Salt, 100 Moys of Salt is 33 Wey- *English*.

8 *Italy* and *Venice*. Coins, One Liver at *Leghorn* is 9 Pence Sterling. One Crown Currant at *Florence* 5 s. 3 d. One Ducat de Banco at *Venice* 4 s. 4 d. One St. Mark 2 s. 10 d. One *Palermo* florin 2 s. 6 d. One Julio or Julier is 6 d. One Dolar 4 s. 6 d. 7 Livers make one Ducat equal to 5 s. 9 d. The Crown of *Rome* and the Crown of *Placentia* are 7 s. 6 d. each. The *Naples* Ducat 5 s. The Crown de ove 6 s. 6 d. The Crown Currant 5 s. 6 d. The Tari 12 d. A Bajocke is worth one half-penny. The *Leghorn* Quintal of 100 Pound is 80 Pounds *London* weight. Their Measure for Silk, Damask &c. is the Brace, 5 of which make 3 Yards *English*.

The Brace they Measure Stuffs, Linnen &c. by is 25 Inches, 8 Braces are 5 Yards *London* measure.

9. *German* Coin, One Rex Dollar of the Empire is 4 s. 5 d. One Gilder of *Noremburg*, is 7 s. 1 d. One Mark-Lubs 16 s. Their weight is a Pound, whereof 120 is a Quintal, and makes at *London* 107 or 109 Pounds, their Measure is the Ell, whereof 100 make 48 Ells *English*.

10. *Poland* and *Rouffia*, *Dantzick*, Their Coins are Dollars, Gilders, Grotzes and Pence, The Rix Dollar is 90 Grotz, and is Valued at 4 s. 6 d. Sterling a Gilder is 1 s. 6 d. The Weight is the Pound whereof 116, at *London* make 100. Their Measure for Length is the Ell, whereof 100 make 49 *London* Ells.

11. *Sweden*, At *Stockholm*, they have a Silver Doller of 2 s. 3 d. Sterling. They have also a Silver Mark or Gilder Piece that is of the same Value with the Mark-Lubs and *Polish* Gilder, 10 Wit, 1 s. 6 d. Sterling. Their Measure is the Ell, whereof 166 and a half make 100 *English* Yards,

12 *Arabia*, and *Persia*. Their Coins are Bisties, Shaxets, Mamandis, and Abassises, the Abassiss is 16 d. Sterling, Mamooda, 1 s. Sterling. *Aleppo*, and *Scandaron*, Their Coins are Shekees, whereof 16 are a Piece of Eight, 14 a *Lyons* Dollar, Dina, 30 s. Sterling. *Goa* Her Coins are the Pardas, the Seraph, or Sheraphin,

Sheraphin, worth 4*s.* 6*d.* Sterl. *Bantam* Coins, are pieces of Copper called Petties, whereof 1000 are in Value about 5*s.* Their Measure is the Cover, equal to one fifth of an *English* Yard. *Siam*, their Coins are a Piece of Gold worth 10*s.* 7*d.* their Silver Coins are about the largeness of a Hazel Nut, worth about 2*s.* 5*d.* *Japan*, their pieces of Gold and Silver are called Ingots, the Silver Ingot weighs 7 Ounces worth 35*s.* they have a Copper Money reckned at 6*s.* 4*d.* Sterl. Their Measure of length is the Ichuan, which is 2 Yards and a half *English*. Their Dry Measure is the Ganr, equal to 3 *English* Pints. *Surrat*, the GrandSeignor has no Coin but those of *Arabia*, to Wit the Asper, worth about 5 Farthings, the Larin worth about 4*s.* the Sheraphin 4*s.* 6*d.* the Rupie is Sterling about 2*s.* The Fanon or Fanam, is worth about 3*d.* A Pagod is commonly reckned at 9*s.* A Salcanin 8*s.* Sterling In many places of the Great *Moguls* Country Almonds pass for Money

13 Raw-Silk is 24 Ounces to the Pound. But the weights called *Venice* Ounce used by Silkmen, and Haberdashers of small Wares, is not allowed by Law. The Ounce being but 13 Penny Weight, 12 Grains. that is, 12 Ounces *Venice* is but 8 Ounces 4 penny weight Troy, and 9 Ounces Avoirdupoise,

Note, The Troy Ounce, is more than the Avoirdupoise by 5 Ounces. But the Avoirdupoise

Pound is more than the Troy, by 3 Pound. A Pound Avoirdupoise is equal to 14 Ounces 12 Pennyweight Troy. And a Pound Troy is about 13 Ounces 2 Drams and a half Avoirdupoise. *Abssaloms* Hair weighed 34 of those Ounces. The Avoirdupoise Ounce is Exactly Equal to the Old *Roman* Ounce, for two Shells in Conjunction are exactly one Ounce Avoirdupoise-

14 A Hundred Pound of Gold weighs 2 Pound 10 Ounces, A Hundred Pound of Silver weighs 26 Pound 4 Ounces, 22, Pence in Copper Farthings and Half-pence weighs one Pound Avoirdupoise.

15 A Tun of Gold at 4 Pounds the Ounce comes to 96000*l.* A Tun of Silver at 5*s.* 2*d.* the Ounce comes to 6200*l.* a Pound of Sterling Gold Comes to 48*l.* an Ounce is worth 4*l.* the Penny weight 4*s.* One Grain is worth 2*d.* a Pound of Sterling Silver comes to 3*l.* 2*s.* an Ounce is worth 5*s.* 2*d.* the Penny weight is worth 3*d.* and something more, One Grain a half Penny. A Pound of Silver Avoirdupoise comes to 3*l.* 15*s.* 3*d.* half-Penny. a Guinea weighs 5 Penny weight and 9 Grains. *French* and *Spanish* Pistols weigh 4 Penny weight and 8 Grains.

16 A Shekle of Silver is 2*s.* 4*d.* half penny. A Shekle of Gold is 15*s.* A Talant of Silver is 353*l.* 11*s.* 10*d.* A Talant of Gold is 5076*l.* 3*s.* 10*d.* A Denari, or *Roman* Penny is 7*d.* 3 Farthings.

Stater

Stater or Tribut Money 2s. 6d. the Widows Mite, half a Farthing
A Manch of Silver 7 l. 10s. A Manch of Gold 75 l.

17- If a Grain of Silver be worth 1 Penny, what are 567890 Grains worth? Divide 567890 by 240, and the Quotient will be 2366 l. the remaining 50 are pence to be added makes 2366 l. 4 s. 2 d. for answer. When the Price is 2 pence Devide by 120, when 3 pence 80, when 4 pence 60, when 5 pence 48, when 6 pence 40 being Alliquote parts or pence in 20 s.

Collibus, a Money Changer.

18 The Camp of *Israel* was 12 Miles Square, and the distance between the Ark and the Camp was about 3 Miles or a Sabbath Days Journey. 'Tis said that *Hercules* Run 125 Paces or the Eight part of a Mile in one Breath before he stood still. 160 Perches in Length, and one in Breadth, or 80 in Length and 2 in Breadth, or 40 in Length, and 4 in Breadth make an Acre. 640 Acres, one Mile. 125 Geometrical Paces of 5 Foot to a Pace, is one Stade, and 8 Stades, an *Italian* Mile.

A Wood-Land Peach or Pole is 18 Foot, Used in *Coppices*, *Moors* and *Fens*. 21 Foot is a Pole Church Measure, that is, of the Land that did or doth belong to the Church, and is used in *Lancashire*, and *Ireland*. 24 Foot to the Pole is called Forest Measure, a Rood is a Quarter of an Acre. a Ridg half an Acre, an

Arpen or Arpent one Acre, or Furlong. an Oxgang is 15 Acres, a Virgate or a Yard-land 30. a Hide of Land 100, and a Plough-land 120 Acres. 43560, Square Feet, one Acre, 640, Acres, one Mile. 220 Yards in Length and 22 in Breadth make an Acre. 1760 Yards are an *English* Mile, but the Miles between Place and place or 20 Miles from *London* are commonly longer. 160 square Perches is an Acre, 40 Perches is a Quarter of an Acre. 80 half an Acre.

The *Arabian* Pole is 14 Foot, *Ezekiels* Reed is 10 Foot, a *Fathom* is 6 Foot. The *Jews* or *Cairo* Cubit is 23 Inches. The common Cubit is half a Yard, but a Geometrical Cubit is 3 Yards. And 'tis thought that *Noahs* Ark was Built by this Cubit. A Span is 9 Inches, a Palm or Hands breadth is 4 Inches, by which is Metered the Size of Horses. A Hairs breadth is the 48 Part of an Inch, 3 Barly Corns in Length or 6 in Breadth makes an Inch, 12 Inches one Foot

19 To Multiply 5 Foot 3 Inches, by 2 Foot 4 Inches, called Duodecimal Arithmetick or Cross Multiplication (of Wonderful use in Measuring) Say 2 times 5 is ten Foot, then two times 3 is 6 Inches. then 4 times 5 is 20 Inches or one Foot 8 inches : and lastly 4 times 3 is 12 parts or one Inch, the whole Sum is 12 Foot 3 Inches.

N. B. 16 Quarters is one Inch, 144 Inches one Foot, 9 Foot one Yard

Yard. 272 Feet and a half one Square Rod. 1728 Inches one Solid Foot.

20 To Measure Surfaces or flat measure such as Board, Glass, Flooring, Tiling, Painting, Pavement, Wainscot &c. Multiply the Length by the Breadth, and that Product divide by 144, and what remains Multiply by the parts of the next Inferior Denomination, still dividing by 144.

Take a Line and apply it to any Corner of the Room (you are to Measure) going into every Corner with the string, till you come to the place you began at: Then see how many Feet and Inches the string contains, and set that down, then Measure the Height by the same method (going into every Angle of the Mouldings) and set that down under the other, and Multiply the one by the other and divide by 9 (the Feet in a Yard squ.) and the Quotient will be the Content in Yards.

21 To find the Solid Content of any Thing, Multiply the Length and Breadth together, and that Product by the Depth, which last Product, Divide by 1728, (the Inches in a Solid Foot) and the Quotient will be the Content in Solid Feet for Timber, Stone &c.

22 Multiply the Breadth and Thickness together. and that Product by the Length, gives the Content.

23 In Tapering Timber, whether it be Round or Square, I take the Girt, at about one third

part of its Length from the greater end, two Seventh parts of that Girt is the truest Square or equal Side, by which I Multiply the whole Length, and the Product is the Solid Content.

24 Having the Breadth and Depth of a piece of Timber, to know how much in length of that piece will make a Solid Foot, Multiply the breadth and depth together and that Product make Divisor to 1728:

25 For Board or Glass, having the breadth in Inches, let it be Divisor to 144

26 To Measure round Pillars, Multiply the Height by the Circumference.

27 To Measure Square Pillars add the 4 sides or breadths together, and Multiply the Total by the Height.

28 To Measure Polygons (being Figures of many Angles or Corners) add all the Sides together, and Multiply the Total by the length. To Measure a Globe, Multiply the Diameter in it self and that Product by 21, and that Product by 11, which Divide by 21 the Quotient gives the Content

29 To Measure Cones (which are Circular Figures Broad at the bottom and growing Narrow upwards) Multiply half the Length by the Circumference.

30 Arches are Measured by taking the Breadth and half the breadth of the Arch, and add them together, and Multiply the Total by the Length for the content in thickness of the Arch

To find the Content of Triangles of all Sorts, Multiply half the Base by the Perpendicular, or halt the Perpendicular by the Base, and the Product is the Content.

Ovals are Measur'd by Multiplying the length by the breadth, and that Product Multiply by a 11, and that Product Divide by 14 and the Quotient gives the Content.

31 Flooring, Roofing, and Tiling are Measured by the square of 10 Foot. To Measure Tiling, take the Depth and half the Depth of the House, from out side to out side; and Multiply it by the Front, taken between the middle of the two party Walls gives the Content.

32 Brick-work is Measured by the Rod square, Multiply the Number of Feet in the Face of the Wall, by the Number of half Bricks, the Wall is in thickness; and one third part of that Product gives the Number of Feet contained in the Wall, which reduce into Rods by dividing by 272 the Feet in a Rod square.

33 In a Yard square you have a Load of Earth in Digging, if the Dimensions be given in Feet, Multiply the Length by the Breadth, and the Product by the Depth; then Divide the last Product by 27, and the Quotient will be the Content in Solid Yards.

34 A Vessel that is 27 Solid Feet, may hold 22 or 23 Bushels of Wheat.

35 Set a Pole upright in a Spring, Pool, Pond, or River,

and mark how many Feet and Inches of it is above Water, then set an other Pole of equal length with the other in the place where you wou'd have the Water come to: Then place the Center of a Quadrant on the top of the Pole the Plomer hanging free, Spy thro' the Sight the top of the Pole that is in the Water, and if the Thread cuts any Degree of the Quadrant the Water may be convey'd by a Pipe laid in the Earth.

36 Distillers in London weigh, their Vessels when full, and for half an Hoghead, which is 31 Gallons and a half, they allow two Hundred one Quarter and a 11 Pound for Cask and Liquor, allowing one Quarter and 22 Pound for the Cask.

For a Punchion, they allow, Cask and Liquor, 6 Hundred, one Quarter, and 2 Pound. For a Canary Pipe 8 Hundred 2 Quarters and 17 Pound.

For a Butt or Pipe, holding 126 Gallons, they allow for Butt and Liquor, 9 Hundred 2 Quarters and 17 Pound.

For a Hoghead, they allow 4 Hundred 2 Quar. and 22 Pound. How exact this estimation is 'Tis not determin, but I do affirm that some Spirits are lighter than others, for the higher the Spirit is, the lighter the quantity.

37 An *English Butt* is 50 Inches long (46 in length of Liquor) 31 Inches in depth at the Bung, 25 Inches Diameter at the Head, and holds 108 Gallons.

38 A Barrel is in length 31 Inches, in depth at the Bung 23 Inches and a half, the Head Diameter 21 Inches, and holds 36 Gallons, and when empty, weighs 13 Pound Avoirdupoise,

39 A Kilderkin is in length 24 Inches and a half, in depth at the Bung 18 Inches 3 Quarters, Head Diameter 16 Inches, and holds 18 Gallons.

40 A Firkin is in length 19 Inches the Bung Diameter 15 Inches, Head Diameter 13 Inches, and holds 8 Gallons at *London*, but in the Country 9 Gallons to a Firkin. A Hoghead of Beer is 54 Gallons. A Tun of Wine is 252 Gallons. A Tonne 424. A Sembole of Wine is half a Tun. A Load 3 Hogheads. A Pipe or Butt 126 Gallons. Canary Pipe is 116 Gallons and a half almost A Hoghead 63 Gal. an Aume 40. A Hoghead of Brandy is 54 Gallons and one third of a Gallon. An Anchor of Brandy is 10 Gallons. The *Irish* Gallon contains 224 Solid Inches for Wine or Brandy. A Pint of Wine or Water is a Pound. A Rack Vineage is a second Voyage to *France*, for Wines Rackt or drawn from the Lees.

Prisage, out of every 10 Tun of Wine, One is for the King, paying 20 s. acknowledgment.

41 To Measure Dry Things, as Grain, Corn, &c. there is first the Gallon, which is Bigger than the Wine Gallon, and Less than the Ale or Beer Gallon. Containing 272 Cubick Inches

and a Quarter, and 9 Pound 13 Ounces 12 Drams and a half Avoirdupoise weight, 2 of those Gallons make a Peck, 4 Pecks a Bushel, 4 Bushels the Comb or Curnock, 2 Curnocks make a Quarter, Seam or Raff. and 10 Quarters a Last, which contains 5120 pints, and so many Pounds *Troy* weight: So that a Garrison of 5000 Men, allowing each but a Pound of Bread *per Diem*, will consume near a Last or 80 Bushels every Day, and 250 Men in a Ship of War, will drink a Tun of Beer in 2 Days, allowing each Man about a Pottle *per* Day.

42 Oyle and Honey are Measured by Wine Measure, a Gallon of Oyle weighs 7 Pound and a half, a Jarr of Oyle, Olives &c. 26 Pound each.

43 An Ephah or Bath is 9 Gallons Wine Measure. An Omer 3 pints and a half. a Hin is about 3 Quarts, a Kab one quart. a Log, Pot, or Sextary half a pint, a Chenix or Measure of Corn one quart, the allowance to a Servant for one Day.

44 A Sack of Wooll is 26 Stone or 364 Pound, and is Sufficient to Finish 4 Standard Clothes to Render 'em True Breadth, true weight, and true Length, that is Six Quarters and a half wide 60 Pound in weight, and 24 Yards long.

Seven Pound of Wooll is one Clove, 2 Cloves one Stone. 2 Stone one Tod. 6 Tod and a half one Weigh. 2 weighs one Sack, 12 Sacks one Last or 4368 Pounds

Pounds. Orgal is the Lees of Wine Dried, used by Dyers to make Cloth take Colour.

A Pack or 240 Pound weight of short Wooll, will for a week employ 63 Persons to Manufacture it into Cloath. *Viz.* 3 Men to Sort, Dry, Mix and make it fit for the Stock Carder. 5 to Scribel or Stock-card it. 35 Women and Girls to Card and Spin it. 8 Men to Weave it. 4 Men and Boys to Spool it and wind Quills. 8 Men and Boys to Scoure, Burle, Mill or Full it, Row, Sheare, Rack and Press it. And a Pack of large, long Combing Wooll, that commonly grows in *Lincolnshire, Leicestershire, Northamptonshire* and *Kent*, made into fine Stuffs, Serges, Sagathies, Calimancoes &c. For the *Spanish* Trade, will employ for one Week 202 Persons, who will earn 43 *l.* 10 *s* thus. 7 Combers 3 *l.* 10 *s*, Dying 5 *l.* 150 Spinners 18 *l.* 20 Throwers & Doublers 5 *l.* 25 Weavers & attendance 12 *l.* Such a Pack if wrought into the finest Stuffs, wou'd employ double the Number of Hands, in the spinning and Weaving especially. A Pack of Wooll made into Stockings, will employ for one Week 184 Persons, who will earn 56 *l.* thus. 10 Combers 5 *l.* 5 *s*. The Dyer 1 *l.* 6 *s*. 102 Spinners 15 *l.* 12 Doublers & Throwers 4 *l.* 10 *s*. 60 Stocking Weavers 30 *l.*

Silk Manufactured in the Broad-Weaving Trade is generally Legee, brought from *Turky*,

in Exchange for our Woollen Cloth, a Hundred weight of which, will employ Weekly 297 Persons, *Viz.* 70 Throwers. 6 Dyers. 85 Winders. 50 Quillers. 26 Warpers. 60 Weavers And therein their Different Occupations will earn 88 *l.* 10 *s*.

To make a Hundred weight of *Italian* Silk into Ribbons, will employ Weekly 170 Persons thus 70 Throwers. 50 Weavers. 50 Quill Boys & attendance.

An Hundred weight of Silk wrought up into Stockings, will employ Weekly 255 Persons *Viz.* 75 Stocking-frame-knitters. 50 Winders. 28 Sizers. 26 Seamers 6 Trimmers. 70 Throwers

To wind a 100 weight of Silk for the Silver Spinner, will employ Weekly 50 Persons.

The Spinner and 10 Boys may Spinn into Silver Thread 2 Pound of Silk in one Week, so that a 100 weight, will employ 500 Persons. Thus you have an Idea, of the Dependance of our Poor on these Trades, which are influenced by the Woollen Manufactory.

The Satisfaction that Factors have for their Care and Industry in buying and selling, is called Commission or Factorage. And is at *Virginia, Bardadoes*, and *Jamaica*, 5 and 3 per Cent. and so at most of the Western Parts: In *Italy* two and a half, in *Holland* one and a half, in *France, Portugal, Spain*, and most parts of *Europe*, two per Cent.

45 A Stone of Wooll, Allom, Tallow, Cheese, Butter, Iron, Shot, and Mens weight that Ride Races, is 14 Pound to the Stone: But a Stone of Sugar Spice, Wax, or Butchers Meat (at London) is but 8 Pound to the Stone; a Stone of Hemp is 20 Pound. A Last of Flax is 3 Hundred weight. A Last of Iron Stone is 4000 Weight. A Stone of Wire is 10 Pound.

45 Frize Holland is the strongest and best Colour of any Holland of that fineness, and to prevent your being deceiv'd, I will give the Length and Breadth of it, and some others, that are of general use, viz.

Frize-Holland is never Callendred nor Thickned with Pap, but just as it comes from the Whitsters: 'tis Yard quar. and half wide, the Piece contains from 29 to 34 Ells at the most: and 'tis half a Quarter wider than those commonly called *Frize-Holland* which are not Right.

Gulix-Holland, is of general use among the Gentry and Persons of Quality, it being the most proper of any for fine Shifts Sheets &c. 'Tis very white, and of fine Cloth the strongest except true *Frize*. Tis just Yard wide, and contains in the Piece from 29 to 31 Ells or thereabout: There is half Pieces folded double and done up in Blew Paper, the Price used to be from 2s. 6d, to 16s. an Ell.

Alcomore Holland, is a very strong Cloth and wears exceeding well, 'tis about Yard and

half quarter wide, the Piece containing about 29 or 34 Ells.

Izarees, is a Callico made exact Eight Yards long; and Yard half quarter wide, wove double Threaded both ways. and is the strongest, and finest Callico that is made double Threaded, 'tis very white and much wore by the Gentry for Shifts.

Coureyes, is a sort of fine thick strong Callicoe Wove double threaded one way, 'tis about Yard wide, and 7 Yards and half to the Piece.

Gingams, is a very serviceable Callicoe. and of general use for Shifts, Shirts, Sheets &c. 'tis Yard and half wide, and 40 Yards in the Piece, wove double threaded both ways, and wears exceeding well and very white if washed by it self from other Linnen, there are *Gingams* double threaded but one way.

Indian Dimeties, are a very strong, warm, holsum wear for Shifts, Sheets &c. the Piece contains 10 Yards in Length, Yard and half wide. and washes exceeding white. Callico Diaper is 10 Yards to the Piece.

Bettillies, the Longest are the best, and contain about 25 Yards in the Piece, near Ell wide, they are the Whitest and Strongest of all Mellings that come to great Britain. *Scots-Linnen* is 120 Ells to a Hundred. a Bolt of Canvas is 28 Ells.

47 The several Heats Smiths take of their Iron viz. A sparkling. or Welding Heat, is used when

when they double up their Iron, or Weld two pieces of Iron together end to end,

A Flame or white Heat, is used when the Iron has not its form or Size, but must be Forged into both.

A Blood-Red-Heat, is used when the Iron has already its Form and Size, but may want a little Hammering to Smooth and fit it for the File. *Note*, when you thrust your File forwards, lean heavy upon it, because the Teeth of the File are made to Cut forwards, but when you draw back your File to recover another thrust, lift, or bear the File lightly just above the Work, for it cuts not coming back. And so of the Saw

If you make your Iron too Hot, it will Red-Sear, *i. e.* Break or Crack under the Hammer while tis Working between Hot and Cold.

When you Braze any thing, take small pieces of Brasse, and lay 'em on the place that must be Brazed, and strew a little Glass beaten to Powder on it to make it run the Sooner,

The first Iron that Runs from the Stone when 'tis melting, is the Softest and Toughest, and is preserv'd to make Wyre of.

To Harden and Temper, *English, Flemish, and Swedish* Steel, you must give 'em a pretty high Heat, then suddenly quench in Water to make 'em very Hard, But *Spanish, and Venice* Steel, will need but a Blood-Red-Heat, then quench it.

If your Steel be too Hard or Brittle, for an Edge, Spring, or pointed Instrument, you may let it down, or make it softer, by Tempering it thus, Take a piece of Grinstone or Whetstone, and rub hard upon your Work to take the black Scurf off it, and brighten it, then let it heat in the Fire, and as it grows hotter, you will see the Colour change by degrees, coming first to a light Goldish colour, then to a Darker Goldish colour, and at last to a Blew colour, Elect which of these colours your work requires, and then quench it suddenly in Water.

The Light Goldish colour is for Files, cold Chissels and Punches, that Punch into Iron and Steel. The Dark Goldish colour is for Punches to use on Brasse and most Edge Tools, The Blew Colour gives the Temper to Springs in general, and Beauty to Iron and Steel. Workmen sometimes grind Indico and Salad Oyle together and rub that Mixture upon it with a Woollen Rag, while 'tis Heating, and let it Cool of it self.

Hammer Hardning, is most used on Iron and Steel plates, for Dripping-pans, Saws, straight Rules &c.

Casse Hardning is thus, Take Cow-Horn or hoof, dry it well in an Oven, and beat it to Powder, put as much Bay-Salt as Powder into stale Chamberly, or white Wine Vinegar, and mix 'em well together, cover your Iron

Iron or Steel all over with this mixture, and wrap it up in Loam or plate Iron, so as the mixture touch every part of your Work, then put it in the Fire and blow the Coles to it till the whole lump have a Blood-Red-Heat, but no higher, then take it out and quench it.

The best *English* Steel for Edge Tools, Files and Puncheons, is made about the Forrest of *Dean*.

Venice-Steel. is the best for Razors, Surgeons Instruments,

Gravers, &c. A general Rule to be Observed,

*He that will a good Edge win,
Must forge Thick and Grind thin.*

If the Iron of a Plane be set too rank, knock with your Hammer on the Britch of the stock, and then upon the wedge; this sets it fine, but you may set your Iron as rank as you can make good Work, and when you take out the Iron to whet it, knock upon the Stock between the Mouth and the fore end,

How to make a Square, if another be wanting to make it by.

Draw a right Line, which Divide into two equal parts by a point, upon which as a Center describe a Semicircle; then in any part of that Circle make a Point, from which point two right Lines being drawn to each end of the other right line, shall constitute a Square or right Angle at the Point in the Semicircle: Two pieces of Wood so Framed, shall be a true Square,

48 When Joyners are to fit a Side of a piece of Stuff against the side of another piece of Stuff that is not regular, they Scribe it thus, They lay the piece of Stuff they intend to Scribe close against the other piece they intend to Scribe to, and open the Compasses to the widest distance, their two pieces bear off each other, and continuing this widerth of the Compass, they bear the point of one of the shanks against the side they intend to Scribe to, and with the point of

the other shank they draw a line upon the stuff to be scribed, EVENLY a long by the side of the piece to be Scribed to; then Work a way the stuff exactly to that Line, and when these two pieces are put together, they will seem to joint.

43 Solid Feet of round Timber is a Tun. 50 Cubical Feet of hewn Timber is a Load. In a Foot of Timber is 1728 Cubical or square Inches, and as often as 1728 Inches are found in a piece of Timber, be it round or square, so many Foot of Timber is contained in the piece.

So in the Art of Gauging, the Gallon for Ale and Beer, is agree'd on to be 282 Cubical Inches. And the Wine Gallon 231. And the Gallon of Dry-Measure 272. and are the 3 Numbers all Gaugers make use of for Divisors.

Therefore so often as 282 Cubical

Cubical Inches is contained in any Vessel round or square, &c. so many Gallons of Ale or Beer the said Vessel will hold, The like is to be observed in Wine, and dry Measure. They Multiply the one side of a Square or Oblong into the other, and Divide by either of those Numbers having regard to the quality of the Liquor &c. and the Quotient gives the Area in Gallons upon an Inch deep. But you may shorten the Work, by only Multiplying the sides of the Squares, or the Diameters of Rounds &c. into themselves, the Product is the Number of Gallons and Parts the Vessel holds upon an Inch in Depth, and when that receives thickness, by being 2, 3, or 4 Inches, deep, then 'tis a Solid Body and Contains so many Gallons and parts as 'tis Inches and parts deep.

A Cubical Foot will hold 6 Gallons, and almost a pint of Ale or Beer, ditto of Wine 7 Gallons 2 Quarts and almost a pint. a Cubical Foot of Dry Measure will hold 6 Gallons and a half and something more.

A Bushel of Salt 56 lb. Avoirdupoise, a Wey is 40 Bushels. 56 Pound of Butter, or 60 Pound of Sops, make a Firkin, 2 firkins a Barrel. In Essex, Butter or Cheese, is 248 Pound to the Wey. But in Suffolk, 336 Pound to the Wey.

49 A Load of Hay is 36 Trufs, each Truf to weigh 56 Pound, but in June and August the Trufs must weigh 60 Pound, on forfei-

ture of 18 s. per Trufs. Wheat Straw for Litter &c. is 36 Pound to a Truf. Deal-Boards are 6 score to the Hundred. Pales and Laths are 5 score to the Hundred of 5 Foot long, 6 score 4 foot, and 7 score of 3 foot long. 500 Nails 6 score to the Hundred, are allowed to a Bundle of Laths for one square of Tiling or 100 Foot.

A Strait grain'd piece of Oak-Timber 10 Inches square, may be render'd into 400 Laths, A Workman will rend a 1000 for 3s.

50 Tiles are 6 Score to the Hundred, a 1000 of plain Tiles with 5, 6, or 7. Ridg Tiles are a Load. Plain Tiles are 10 Inches and a half long, 6 Inches and a quarter Broad, and half an Inch and half a quarter thick, 800 of those Tiles, if layd 3 Inches out, will cover an 100 Foot or one Square. If 3 Inches and a half out 750 will do it. Roof-Tiles are 13 Inches long, Gutter Tiles 10 and a half.

51. 500 Bricks are a Load, each Brick 9 Inches long, 4 and a half broad, and 2 Inches and a quarter thick, 32 of those Bricks will cover or pave a Yard square if laid flat, if on edge 64, but of Flemish Bricks you must have 72 if laid flat, and if edgways 100.

162000 Bricks will build a House 3 Rod high, and 12 Rod about allowing 4500 Bricks to a Rod of Wall, brick an half or 13 Inches thick. 8 bushels of Lime is allowed to 1000 of Bricks. 3 Load of Sand to a

Load

Load of Lime to make good Morter. A square Yard of well wrought Clay will make 8 Hundred Bricks.

52 *Land* as good as most in England is Let at 20 s. an Acre *per Annum*, and Sold at 20 Years Purchase or 20 Pound. Now in an Acre of *Land* are 43560 square feet, and in 20 Pound are 4800 d, by which divide 43560, the Quotient will be 9, and 360 remaining, which shews that one penny will Purchase 9 square feet and almost 13 Inches of *Land*, 3 foot broad and 3 long, and somewhat more, it follows that two shillings Purchases a piece of Ground of 216 feet, 18 foot long and 12 foot broad, enough to build a pretty House upon and Room for a little Garden.

To Purchase *Land* to him and his Assigns for ever (or if it be given so by Will) this is but for Life, but if it be to him his Heirs and Assigns for ever it is Fee Simple, A *Fee Simple*, is *Land* holden to a Mans Heirs and Assigns for ever, the best Title.

Fee-Farm, is Lands holden to a Mans Heirs for Ever under Rent.

Lease Parole, is Letting of Lands by word of Mouth.

Fealty, is an Oath taken at the admittance of a Tenant, to be true to the Lord of the Manner. Knight Service is to bear Arms for the Lord of the Manner.

In Levying of Fines. be sure to expresse the Uses by Deed, &

omit the Names of none of the places where each parcel lies, least your Fine be Void, a Fine cuts off the Heirs of the Cognisor but not of Inrayl'd Land.

A Possession of 3 Years in matters Personal, shall beget a Right, and for real Estates, a Possession of Ten Years among such Persons as live on or Near the Premisses, and Twenty Years among those that live elsewhere, shall conclude as much. See *Justinians Code*, Book 7.

Bargains of above Ten Pound Value should be under Hand & Seal, else the Parties, or one of 'em may refuse to stand to it, except Earnest or a Note be given. *Nuncupative Will*, is declared by Words, & not Written.

Administrators power is equal to an Executors, and are bound to pay the Deceased's Debts, according to the Value of the Goods.

53 The Distinction amongst the Nobles, may be seen by their Parliament Robes, in their Several Gards on their Mantles, and Short Cloakes about their Shoulders, for a Baron has but two Gards, a Viscount two and a half, an Earl Three, a Marquess Three and a half, a Duke Four. The Mantle of a Duke, Marquess, and Earl is faced with Ermine, Viscounts and Barons with plain white Furr.

They have all Coronets, which you may see behind their Coaches, a Baron has Six Pearls upon the Circle, Viscounts the Circle

Circle of Pearls without Number, an Earl has the Pearls raised upon Points, and Leaves low between, a Marquess, a Pearl and Strawberry leaf round of equal height. Dukes of the Royal-Blood, Bare a Coronet of Crosses and Flower-Deluces.

66 *Islington* and *Tunbridge* Waters pass by *Urin*, *Acton*, *Epsom*, *Stretham*, *Dulwich* and *Richmond* by *Stool*, The *Bath-Waters*, are taken by Consumptive Persons, being of an exhi-

larating, Corroborating and Appetite procuring Quality, almost to a Miracle. Temperance is the best Physick, Patience the best Law, and a good Conscience the best Divinity.

What may be, may not be, and a Wise Man will, if he can help it, leave nothing to Fortune, for Truth will never serve the purposes of Knaves. so it will never Suit the understandings of Fools,

Divers Rules, how to Cast up Expences, Wages, the Price of Goods &c.

1 In a Chaldron of Coles, there are 36 Bushels call 'em pence, and for every penny reckon 3 s. so have you the prize of the Chaldron, a 11 d. a Bushel is 33 s. a Chaldron, for 11 times 3 s. is 1 l. 13 s. 9 d. and so of any other Rate.

Note, the Cole Bushel is to hold 8 Gallons and one quart of Water, and the Cole Vatt or Fat to Contain 9 of those Bushels or 74 Gallons and 1 quart of Water, whence 'tis called Water Measure, and is larger than those used in Measuring of Grain, or when Sea Cole, Salt, &c. are Measured with the Corn Bushel, they are heaped. or else there is allowed 5 pecks to the Bushel, and this they also call Water Measure, those that sell short of Water Measure &c. forfeit for every Vatt 40 s.

2 As many farthings as will buy a pound, so oft in the Hundred weight is 2 s. 4 d. found.

3 As many farthings as one

pound Costs, twice so many Shillings, and once so many Groats the great Hundred Costs (or 112.)

4 As many half pence, that each pound doth Cost, so many Crowns, the Hundred, abating so many Groats.

Each half penny a pound, that's Sold or Bought, yields four times Shillings, twice as many Groats.

6 Each penny which a pound of Goods is bought for, you give Nine times so many Shillings, once so many Groats for.

7 How many pence you give for each one thing, so many Angels the long Hundred bring (or 120)

Note, if it Cost any odd farthings, for every farthing add half a Crown.

8 Double the Sterling pounds the long Hundred stands in, so many pence one Costs, for odd half Crowns add farthings.

L

9 As

9 As many farthings as each single one doth Cost, twice as many Shillings, and once as many pence the 100 Cost.

10 As many pence that each single thing is bought for, then eight times as many shillings, and once as many Greats the Hundred Cost.

11 As many Pence, so many shillings, as many Farthings so many Three-pences each produceth, (Dozens)

12 As many pence, that one costs, so many Angels, and twice so many shillings, doth 144 cost.

13 As many farthings one costs, so many times 3 s. the lessor Gros costs.

14. As many farthings one costs, so many pounds and Ten pence the 1000 comes to.

15 As many pounds the Thousand costs, so many farthings each one cost.

16 *The Farthings in each Week doth make appear, The Shillings and the Pence Spent in the Year.* 17 *If you Number the Pennyes, of each Days Expence, 'Twill shew, how many Pounds, and Angels. Groats and Pence You Spend within the Years Circumference.* 18 *The third part of the Pounds you Yearly have, Yields two Pence every Day to Spend or Save.* 15 pound per Annum, a third part of 15 is 5 two pences or ten pence a Day.

Note, If when a third part is taken there should any thing remain, for each one that remains add 3 farthings to the two pen-

ces, and if the Number of pounds exceed 72, you must abate one pound, if twice 72 abate two pounds, if thrice that Number to wit 216. abate 3 pounds and Work with the remaining pounds.

To the Number of pounds add half its Number, Turns them into Marks, and if 1 remains 'tis Ten Shillings more. From the Number of Marks, take its third part, and the remainder is pounds. Double the Marks, and take a third part, Turns 'em into pounds, and if any remains they are Nobles.

To Cast up the Land Tax at 4 s in the Pound: Set the Number of pounds the Yearly Value of the Salleryes, Pensions, Houses Lands &c. and Multiply it by 2, then cut off the last figure to the right Hand, which are so many 2 s. and the remaining figures are pounds.

To cast up what the Collectors must have for their pains, at 3 s. in the pound, Set down the Number of pounds you Collect, and cut off the last figure, which are so many three-pences, then Divide the rest of the figures on the left Hand by 8, turns 'em into pounds, and if any remains they are half Crowns.

To turn Yards into Ells *Flemish*, add a third part, into Ells *English*, Subtract a 5th or Multiply by 8, and cut off the right Hand figure.

To turn Ells *English* into Yards *English*, add a 4th into Ells

Ells *Flemish*, add a 5th or add a Cypher, and take a 6th.

To turn Ells *Flemish* into Yards, Substra& one Quarter.

To turn Ells *Flemish* into Ells *English*. Multiply by 6, and cut off the right Hand figure.

To turn Ells *Flemish* into Ells *English* and Hundreds cut off the two last figures, and halve those to the left, and allow 6 for every 10 to the Right-Hand.

To turn great pounds of Silk, of 24 Ounces, to pounds of 16 Ounces, add half.

To turn small pounds, of 16 Ounces, into pounds of 24 Ounces. Substra& 3 Quarters.

All Goods weighing 1 Hundred wt. have 1 pound Draught, from 1 Hundred to 2 Hundred, 2 pound. from 2 to 3, 3 pound. from 3 to 10, 4 pound. from 10 to 18, 7 pound. and from 18 to 30 Hundred weight 9 pound Draught.

All Hogsheds of Tobacco have an allowance of 4 pound Draught, from 4 Hundred wt. to 5 Hundred 5 pound. and from 6 to 10 and upwards, 6 pound Draught. After the Draught is deducted, then take the Tare (if it be so much *per Cent*) by Substra&ing the Tare from 112, and by the remainder Multiply the Gross weight, and that product Divided by 112, the Quotient will be the Neat weight, or Multiply the Gross weight by the Tare of the whole, which Substra& from the Gross weight, gives the Neat weight,

When the Tare is so much

per Bag, Hogshhead or other Package, Multiply the Number of Bags &c. by the Tare allow'd, and you have the Total Tare, which Substra& from the Gross weight, gives the Neat weight.

To bring Tobacco, or other Goods, that pay Duty by the pound, from Hundreds to pounds Suttle.

Set down the Hundred weights &c. Under the Hundreds set the Hundreds again, then place the Hundreds one space to the left and again one figure or space to the left Hand to which 4th C. add the q. and lb. and you have the Suttle of the whole.

The Interest, of 100 l. in Skillings
for 3, 6, 9, and 12 Months,
at 1, 2, 3, 4, 5, 6, 7, 8, 9,
or 10 *per Cent, per Annum*

Rate of In per C.	3 M. Shil.	6 M. Shil.	9 M. Shil.	12 M. Shil.
1	5	10	15	20
2	10	20	30	40
3	15	30	45	60
4	20	40	60	80
5	25	50	75	100
6	30	60	90	120
7	35	70	105	140
8	40	80	120	160
9	45	90	135	180
10	50	100	150	200

By this Table you may readily find the quarterly Interest of any Sum of Money, if you Multiply the Sum proposed by the Interest in the Table under the Time, & against the Rate required

L 2

and

& divide the Product by 100 with cutting off two places to the Right hand, the Quotient is the Interest in Shillings, then Multiply the remainder of the Shillings by 12, and divide the Product by 100, by cutting off 2 Figures before, gives the Pence, and the remainder of 'em Multiply by 4, and divide by 100, will give you the Farthings, and if any thing remains then they are Hundred parts of a Farthing.

The true Proportions of one Year or 365 Days, are for 3 Months or a quarter of a Year, 91 Days and a quarter. For 6 Months, or half a Year 182 Days and a half, and for 9 Months or 3 quarters of a Year 273 Days and 3 quarters. Now if you add to either of them the days that exceed 3, 6, or 9 Months, and Multiply the Sum by the Number of Days, or the Number of Days by the Sum, you will have the Interest of the Quar, and Days at one Operation.

To find the Interest of any Sum, for any Number of Days. Bring the Principal Money into Pence, then Multiply those Pence by the Days it is out at Interest, and if the Rate be at 6 per Cent then divide by 6089, which is what is produced by the Days of a Year Multiply'd by 100, and divided by the Rate of Interest, But if the Rate be 5 per Cent, then divide by 7300, and the Quotient will be the Answer.

To find the Discount of any Sum, at any Rate, and for any time. Make 12 Months the first

Number in the Rule of Three, the Rate of Interest the second, and the discounted time the third. Another way, Reduce the Money you are to discount into pence, and Multiply those pence by the Number of Months you discount for, and the Product shall be the Dividend, then to the pounds you discount add the time (or the Rate, you discount at) for a Divisor, and then Divide, and the Quotient will be the discount in pence.

The Rate of Interest in Italy is 3 per Cent. In Holland 3. In Swedland 6. France 7. Spain 10. Scotland 10. Barbados 10. Ireland 12. Turkey 20. England 5. Low Interest advances the price of Land: and Increases Trade.

A Table of Interest at 5 per C.
